No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB DB

Human pre Insulin-1 Human ova Human IGF Human bla Human ins

The present sequence represents a mouse preptin peptide. The peptide corresponds to Arg69-Leu102 of the profGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA

(undefined) or Enzyme linked immunoabsorbant

assay

            preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts. Preptins, preptin analogues, preptin agonists, their salts and erivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane disruption); conditions characterised by decreased beta-cell mass or number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    peripheral nervous system injury; Alzheimer's disease;

                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                  CC insulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They CC may also be used for treating and/or preventing peripheral nervous system CC injury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic CC lateral sclerosis; muscular dystrophy; diabetic neuropathy; cardiac CC disease and acute attack; and acute renal insufficiency caused by CC disease and acute attack; and acute renal insufficiency caused by CC ischaemia. They are additionally useful for increasing or maintaining CC beta-cell mass or beta-cell number; for stimulating beta-cell collection via cell differentiation or neogenesis; for increasing type CC proliferation via cell differentiation or neogenesis; for decreasing cell CC death of motor neurons; for increasing muscular end plates; promoting the CC functional recovery of damaged sciatic nerves; preventing peripheral CC motor paralysis during or as a result of chemocherapy, and for improving CC myocardial function. The present sequence represents mouse preptin, which CC is specifically claimed for use in the method of the invention.

Use of preptin, preptin analog or preptin agonist for treating a bone condition (e.g. osteoporosis or osteopenia), increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast maintaining osteoblast

Claim 2; SEQ ID NO 1; 29pp; English.

This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue of agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat compositions. the õ

contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the abovementioned nucleotide sequences, an isolated polypeptide (encoded within an open reading frame of a CA sequence selected from any of the 95 polynucleotide sequences as mentioned in the specification, or its complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above monoclonal antibody, a pharmaceutical composition comprising the above antibody and a pharmaceutical excipient, a kit for detecting cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma an leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corritosseroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the
                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid comprising contiguous nucleotides of any of the 233 polynucleotide seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-SEP-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or for detecting the presence or absence of cancer cells in an individual, a method for inhibiting growth of cancer cells in an eccinidividual, a method for delivering a therapeutic agent to cancer cells in an eccinidividual, an electronic library comprising the above polymucleotide or polypeptide (or their fragments), methods of screening for anticancer activity or for a bioactive agent capable of modulating the activity of a CA protein (CAP), methods for detecting cancer cassociated with expression of a polypeptide in a test cell sample, a method for inhibiting the expression of method for treating cancers and a method for inhibiting the expression of CC A gene in a cell. The composition and methods are useful for detecting, and call diagnosing, preventing and treating cancers, especially lymphoma and claukaemia. These may also be used in screening for agents that modulate cancer. The present sequence is a mouse CAP protein sequence. Note: The sequence data for this patent did not form part of the printed capable for a polympholished or sequence cancer. The present sequence is a mouse CAP protein sequence. Note: The sequence data for this patent did not form part of the printed can be protein sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The present sequence represents a rat preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful

useful

The invention relates to a method for treating a disorder mediated by pancreatic islet beta-cells or beta-cell dysfunction by administering preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts. Preptins, preptin analogues, preptin agonists, their salts and derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane disruption); conditions characterised by decreased beta-cell mass or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (undefined) or Enzyme linked immunoabsorbant assay (BLISA) for quantitatively measuring preptin in a biological fluid preferably cerebrospinal fluid. Agonists or antagonists of preptin peptides a useful for modulating glucose mediated insulin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 34

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes);
and conditions characterised by insulin resistance, undesirably low insulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They may also be used for treating and/or preventing peripheral nervous system injury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic lateral sclerosis; muscular dystrophy; diabettic neuropathy; myocardiopathies such as myocarditis and myocardial infarction; cardiac disease and acute attack; and acute renal insufficiency caused by ischaemia. They are additionally useful for increasing or maintaining beta-cell mass or beta-cell number; for stimulating beta-cell proliferation via cell differentiation or neogenesis; for increasing type cell mass via cell differentiation or neogenesis; for decreasing type cath of motor neurons; for increasing muscular end plates; promoting the functional recovery of damaged sciatic nerves; preventing peripheral compocardial function. The present sequence represents rat preptin, which is specifically claimed for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Loc

Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue c agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from
                                                                                                                                                                 Use of preptin, preptin analog or preptin agonist for treating a condition (e.g. osteoporosis or osteopenia), increasing or mainta bone density, stimulating osteoblast growth, or modulating osteob
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 34 AA;

                                                                                 The invention relates to gene sequences (ABI99915-ABI99934) having modified expression in fetal heart tissue as compared to adult heart tissue and the encoded proteins (ABB57375-ABB57392). The genes have cardiant activity and may be useful in the promotion of the repair of damage to heart tissue caused by myocardial necrosis. The gene sequences are useful for screening potential compounds for the ability to influence screening methods may be used to treat and prevent disease with which myocardial necrosis is associated, such as cardiac hypertrophy and cardiac insufficiency. Diagnosis of diseases such as those above is also disclosed. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                  Genes having differential expression useful for screening potential drugs caused by myocardial necrosis.
                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use.                          comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a control that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal control to pain, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal composition of a polynucleotide sequence which is differentially expression of the polynucleotide sequence which is differentially composed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition to the polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more compained that the compound that the specification, which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed composition, but was obtained in electronic form directly from WIPO at the polynucleotide or the printed sequence presented in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence.                                                                                                                                                                                              The present sequence represents a human preptin peptide. The peptide corresponds to Arg69-Leul02 of the proGFF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA (undefined) or Enzyme linked immunoabsorbant assay (ELISA) for quantitatively measuring preptin in a biological fluid preferably in cerebrospinal fluid. Agonists or antagonists of preptin peptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 glucose-mediated glucose mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bioactive peptide; preptin; pancreatic islet beta-cell; glucose-mediated insulin secretion; insulin synthesis;

Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction, ulcers or inflammation. ø ė

Claim 2; SEQ ID NO 1; 63pp; English

The invention relates to a method for treating a disorder mediated by cc pancreatic islet beta-cells or beta-cell dysfunction by administering classes in the collision of partial dysfunction by administering consists or derivatives thereof. Preptins are able to estimulate the cc proliferation and differentiation of beta-cells and fibroblasts. Cc Preptins, preptin analogues, preptins are able to estimulate the cc derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane cc disruption); conditions characterised by decreased beta-cell mass or cc number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); cand conditions characterised by insulin resistance, undesirably low company also be used for treating and/or preventing peripheral nervous system cinjury; Alzheimer's disease, Parkinson's disease, stroke; amyotrophic disease and acute attack; and acute renal insufficiency caused by ischaemia. They are additionally useful for increasing or maintaining beta-cell mass via cell differentiation or neogenesis; for increasing type cell mass via cell differentiation or neogenesis; for decreasing type death of motor neurons; for increasing muscular end plates; promoting the functional recovery of damaged sciatic nerves; preventing peripheral compocardial function. The present sequence represents human preptin, which is specifically claimed for use in the method of the invention.

                                                                                                                                                                                                                                                                                       This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or ameliorate diseases including osteoporosis, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the human preptin peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of preptin, preptin analog or preptin agonist for treating a bone condition (e.g. osteoporosis or osteopenia), increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast
                                                                                                                                                                                                                                        Sequence 34

CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth CC factors and neurotransmitters, to protect them from peptidase activity in CC vivo for the treatment of various disorders. Endogenous therapeutic CC peptides are not suitable as drug candidates as they require frequent condifying and attaching therapeutic peptides to albumin prevents or CC reduces the action of peptidases to increase length of activity (half contracellular uptake and interference with physiological processes. CAAB90829 to AAB92441 represent peptides which can be used in the CC exemplification of the present invention
                                                                                                                                                                             Best
                                                                                                                                                                Matches

The polynucleotide sequences encoding the Zins3 polypeptides are located on chromosome 12. The present invention also includes antibodies to the Zins3 polypeptides. The Zins3 polypucleotide and polypeptide sequences of the invention are useful for identifying and isolating receptors involved in growth and differentiation of Zins3 responsive cells. This sequence represents human insulin growth factor 2 (IGF2) that shows homology to human Zins3.
